

JobGen.AI – API Documentation

Purpose

These APIs enable external services to submit job-related information and receive a tailored resume, cover letter, and key user details for auto-filling job application forms. Additionally, they can provide dynamic answers to specific job-related questions when needed.

Endpoints

1. job_apply

POST https://www.jobgen.ai/version-test/api/1.1/wf/job_apply

Request Payload

Required Parameters:

Key	Type	Description
email	string	User's email address
job_url	string	URL of the job the user is applying to
description	string	Full job description text

Example Request:

```
{
  "email": "petra.snowman@gmail.com",
  "job_url": "https://seek.com/job/12345678",
  "description": "We are hiring an admin support officer..."
}
```

Successful Response (“outcome”: “Pass”)

```
{
  "outcome": "Pass",
  "resume": "https://.../Test Resume 1.pdf",
  "cover_letter": "https://.../Petra_Cover_Letter.pdf",
  "name": "Petra Snowman",
  "expected_salary": "AUD 55,000",
  "years_of_experience": "5",
  "location": "Armidale, NSW",
  "availability": "Available immediately",
  "work_rights": "Australian Citizen",
}
```

```
"visa_status": "Citizen",
"email": "petra.snowman@gmail.com",
"phone": "0404040404",
"tool": "Microsoft Word"
}
```

❌ Failure Response (“outcome”: “Fail”)

```
{
  "outcome": "Fail"
}
```

This may occur if:

- The provided email is not found in the backend database
 - The job_url or description is empty or invalid
-

2. job_apply_question

This API can be called when a form field does **not** match the top 10 prefilled fields and needs a dynamic response.

POST https://www.jobgen.ai/version-test/api/1.1/wf/job_apply_question

Request Payload

Key	Type	Description
email	string	User's email address
question	string	The job application question to answer

Example:

```
{
  "email": "petra.snowman@gmail.com",
  "question": "Why do you want to work at our company?"
}
```

✅ Response

```
{
  "answer": "I admire your organisation's values and mission..."
}
```

This uses AI (LLM) to dynamically generate a tailored answer based on the job description and the user profile.

Notes

- Both APIs return ready-to-use data for form-filling and application automation
 - All documents are hosted via Bubble's secure CDN
 - The `job_apply_question` endpoint handles unexpected or custom fields dynamically
-

Email Registration Requirement – To Provide Email IDs

To receive a “Pass” response with resume and cover letter:

- The email provided **must exist** in the Bubble database
- Each registered test user must include:
 - Resume PDF URL
 - Cover Letter PDF URL
 - Basic profile fields (salary, experience, etc.)

Ensure emails used during testing are preloaded into JobGen.AI User data type before calling the API.
