Lab 1 Guide

UNSW
SYDNEY

1. Course Intro

UNSW
SYDNEY

Course content & teaching

This course doesn't involve teaching new technical content.

We are expecting you to apply what you learnt throughout your degree.

Lectures

This term, we have been working to get **guest lecturers from industry** who can help give advice on deliverable and your project.

We have lectures from **Atlassian, Canva**, and others which we really encourage you to attend.

Workshop and Help sessions

Every week on **Thursday 4-6pm** at **TBC** a workshop and help session will be held.

The **workshop (first hour)** will cover essential topics that can help you in upcoming deliverables.

The **help session (second hour)** is an opportunity to get help for any specific issues you are facing.

Sessions will be recorded. We encourage you to attend or check out the recording.

Labs

Each group is assigned a **25-minute timeslot within the lab time** for a weekly group meeting. **Attendance is mandatory and will be marked.**

During these meetings:

- assessment items will be discussed
- any relevant assessments will be held
- project progress will be checked,
- advice will be given.

Communications

You have all been added to a **Microsoft Teams group**.

If you have any questions or concerns, please avoid emailing and use that group, or direct message on Teams.

2. What to make

UNSW
SYDNEY

Docker

Your final system must run in a **Docker** container, **UNLESS** your project or part of your project cannot reasonably be containerised in Docker (e.g. it is a mobile app that must run in an emulator or mobile device).

The Docker primer assessment will help you learn Docker if you are unfamiliar with it.

Project topics

You can select your preferred project types (e.g. web app, mobile app, security, algorithms, AI) and we will do our best to assign a project of that type to your group. You can also select your preferred projects within the types.

One member of your group should select your preferences using the **Project Preferences Selection** questionnaire on Moodle.

Project scope

Some projects may have less scope or appear easier than others.

All groups still need to achieve the same standard to earn the same marks. Being assigned an easier project does not mean you need to do less work to earn the same marks.

Easier projects will need to work with the client to expand their scope. Discuss with your tutor your goals and they can help judge what amount of work is needed.

Client communication

All project topics have a **client**.

Tutors can only provide high-level advice regarding the functionality of your system.

You should communicate with your client to clarify requirements for the project.

Your client will be involved in the assessment of your system.

What technologies can I use?

You have complete freedom

- Any programming language
- Any third-party framework or library
- Any data storage method
- Any third-party API

Subject to any requirements by the projects specification or clients (if any)

In summary

1. Using Docker is mandatory.
2. Select project type preferences on Moodle.
3. Communicate with your client to clarify requirements.
4. Complete freedom on technologies, subject to specification and client requirements.

3. Getting started

UNSW
SYDNEY

Special roles

The **scrum master** is a member of your group who facilitates scrum by:

- facilitating the Scrum process
- supporting communication,
- ensuring everything is on track,
- maintaining the project management system (Jira)
- otherwise playing a leadership role

Special roles

The **product owner** is the person responsible for facilitating communication with the client.

Make sure you discuss who you wish to play these two roles.

Summary of Assessments

WEEK 3

Lab – Software Fundamentals (individual) (5%)

Sun - Project proposal (10%)

WEEK 5

Lab – Progressive Demo A (5%)

Sun - Retrospective A (2.5%)

WEEK 7

Lab – Interim Peer Assessment

WEEK 8

Lab - Progressive Demo B (5%)

Sun - Retrospective B (2.5%)

WEEK 9

Lab – Teamwork/Collaboration Assessment (5%)

WEEK 10

Lab – Final Project Demo (20%)

Sat – Project Report (15%)

Sat – Software Quality (20%)

Sat – Final Peer Assessment (10%)
