

# Retrospective for Sprint 1

## Overview

Reflect on past work and identify opportunities for improvement by following the instructions for the [Retrospective Play](#).

|                     |                                                                                          |
|---------------------|------------------------------------------------------------------------------------------|
| Submission Date     | 3 Jul 2025                                                                               |
| Meeting Date & Time | 3 Jul 2025 14:30-15:30                                                                   |
| Team                | Team Injured (Apple)                                                                     |
| Participants        | @Samuel Lim @Lachlan Butcher @Kathy Phan @Aqil Tuan Razali @Lawrence Seeto @Gobind Singh |

## Retrospectives

| ✔ What went well                                                                                                                                                                     | ✖ What did not go so well                                                                                                                   | 🔄 To try                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Team meetings and communication between members were great, even when adjusting times.                                                                                               | I feel like it took us a lot of time just to understand how the api works and how to call the api +1                                        | Clarifying with the client better. ask more specific questions and have more questions ready                                                                                                   |
| Everyone was able to get together before demo to practice our speech.                                                                                                                | Large hiccup with resume uploads, meant to be finished in sprint 1 but unforeseen chrome security features prevented us from completing it. | Pushing code to GitHub branches could be more frequent to keep track of people's progress.                                                                                                     |
| Stand-up meetings worked well where we were able to see each other's progress.                                                                                                       | Difficulties with knowing what the client wanted and there were added features such as the 'Review' button which was not on the proposal.   | Tasks should be broken up into smaller subtasks for each member. This can make achieving deadline and tracking progress more achievable.                                                       |
| We've been doing code demos to get everyone on the same page.                                                                                                                        | We realised we were implementing things that the client had already completed but couldn't give us the code.                                | While identifying what tasks need to be completed, we must ensure there are no redundant areas that would overlap with other tasks. Essentially, come up with a game plan for the development. |
| Although each member had their own dedicated tasks, everyone assisted with other tasks to ensure all team members were on the same page, ensuring consistency across the codebase +1 | There were some overlap between tasks that weren't recognised beforehand as everyone was working simultaneously rather than consecutively.  | We need to be more specific about the task e.g. <a href="#">H13AAPP</a><br><a href="#">LE-61: Clean up codebase</a><br><a href="#">IN PROGRESS</a> doesn't have much in it.                    |

## ✅ Action items [↗](#)

- ☐ Clarify with the client if we can push certain code into github @Lawrence Seeto
- ☐ Pushing code to github branches @Kathy Phan @Lachlan Butcher @Aqil Tuan Razali @Gobind Singh
- ☐ Now that we have more of an understanding on what to do, we can split the tasks up more effectively. @Kathy Phan
- ☐ For game plan, we could discuss what tasks needs to be done by prioritising in a list @Kathy Phan @Samuel Lim @Lawrence Seeto @Lachlan Butcher @Aqil Tuan Razali @Gobind Singh
- ☐ We need to write more descriptive tasks e.g. clean up codebase would be to move css/html from js file into a new file, move platform specific functions into a new file @Gobind Singh
